

## Post OP Medicines

- 1) Norco (Hydrocodone/APAP), OxyIR (Oxycodone), Percocet (Oxycodone/APAP):** Short acting pain pill, to be used as needed for pain.
- 2) Celebrex or Mobic:** Anti-inflammatory, taken once a day for 1 month after surgery. Make sure you take this medication with food.
- 3) Senokot-S (Senna Plus) or Colace:** Stool softener/laxative for constipation, Starting 2 days before surgery. Continue until you are no longer taking pain medicine.
- 4) Aspirin:** 81mg tablet to be taken twice daily for 4 weeks after surgery to prevent blood clots. If you were on a blood thinner prior to surgery this will be resumed instead of aspirin.
- 5) Scopolamine patch:** For nausea prevention. This patch will be applied at the hospital before your surgery.
- 6) An antibiotic will be given for one week after surgery to prevent infection and help wound healing.**
